MultiFlex ETH 1040 Motion Controller

An Introduction to the MultiFlex ETH 1040 Motion Control Card...

The MultiFlex ETH 1040 is a multi-axis Ethernet motion controller designed to provide OEM machine builders with unmatched quality and value in a compact and economical stand-alone control card. Comprehensive feature set includes:

- Fast 10/100 Mbit Ethernet communication and RS-232 serial communication
- 4 axes of pulse command outputs for controlling stepper motors or pulse-controlled servo systems
- Up to 8 axes of pulse (servo or stepper) control with custom firmware (contact PMC)
- Optional encoders available for closed-loop control
- Multi-axis point-to-point & coordinated motion
- Trapezoidal, S-curve and parabolic profiles
- 5 MHz pulse outputs for precise micro-stepping
- 20 million encoder counts/sec
- 1 KHz closed-loop update rate each axis
- On-the-fly trajectory changes
- Eight 14-bit analog inputs (optional)
- On-board multi-tasking
- Consistent real-time behavior: Peak performance is maintained no matter which features are enabled
- Dedicated high-speed I/O (encoder capture and compare)
- Compatible with MultiFlex family of controllers
- Includes Motion Integrator™ suite of graphical installation, tuning and diagnostic programs
- 32 and 64-bit Windows and Linux support

- A powerful and economical 4 axis stand-alone stepper and pulse-controlled servo motion controller
- Advanced 64-bit RISC processor for robust real-time motion and I/O control
- Extensive on-board digital and analog I/O
- 10/100 Mbit Ethernet or RS-232 communication
- Comprehensive support for C/C++/C#, .NET, Delphi, LabVIEW and Visual Basic programmers
- Powerful suite of software utilities and sample programs included at no extra charge
- High-performance, value priced
MultiFlex ETH 1040 Specifications

Architecture
- Stand-alone Ethernet motion control card
- 10/100 base-T Ethernet and RS/232 ports
- 64-bit RISC processor with high-capacity customizable FPGA

Communication
- 10/100 Mbit/sec communication via Ethernet port
- Up to 2000+ command/reply cycles per second

Programming
- Software API is compatible with all MultiFlex controller models
- Programmable in C/C++/C#/NET, Delphi, LabVIEW or VB
- Full support for 32 and 64 bit Windows & Linux
- Includes Motion Integrator™ graphical and intuitive Windows® software suite for easy installation, tuning and diagnostics
- Native LabVIEW/BridgeVIEW™ support via the Motion VI Library
- For Real-Time OS support, contact PMC
- Also programmable in easy-to-use motion command language
- Programmable in user units (mm, microns, ft/sec...etc.)

Stepper Control Signals
- 4 axes of Step/Direction or CW/CCW stepper control
- (Up to 8 axis stepper control with custom firmware)
- 5 MHz maximum step (pulse) rate each axis (up to 4 axes)
- Full step, half-step and microstepping control. Full & half current
- Open or closed-loop stepper control

Position Feedback
- Optional: 4 quadrature incremental encoders with index
- 20 MHz encoder count rate for each axis (up to 4 axes)
- Single-ended or differential inputs (A+, A-, B+, B-, I+, I-)
- High-speed encoder failure detection circuitry
- Digital noise filtering
- 32-bit position resolution (+/-2,147,483,647 encoder counts)

Communication
- 10/100 Mbit/sec communication via Ethernet port
- Up to 2000+ command/reply cycles per second

Programming
- Software API is compatible with all MultiFlex controller models
- Programmable in C/C++/C#/NET, Delphi, LabVIEW or VB
- Full support for 32 and 64 bit Windows & Linux
- Includes Motion Integrator™ graphical and intuitive Windows® software suite for easy installation, tuning and diagnostics
- Native LabVIEW/BridgeVIEW™ support via the Motion VI Library
- For Real-Time OS support, contact PMC
- Also programmable in easy-to-use motion command language
- Programmable in user units (mm, microns, ft/sec...etc.)

Stepper Control Signals
- 4 axes of Step/Direction or CW/CCW stepper control
- (Up to 8 axis stepper control with custom firmware)
- 5 MHz maximum step (pulse) rate each axis (up to 4 axes)
- Full step, half-step and microstepping control. Full & half current
- Open or closed-loop stepper control

Position Feedback
- Optional: 4 quadrature incremental encoders with index
- 20 MHz encoder count rate for each axis (up to 4 axes)
- Single-ended or differential inputs (A+, A-, B+, B-, I+, I-)
- High-speed encoder failure detection circuitry
- Digital noise filtering
- 32-bit position resolution (+/-2,147,483,647 encoder counts)

I/O Signals
- 16 uncommitted bi-directional opto-isolated inputs with individually configurable supply & return: 5 to 24 Volts. (For home, ± limits, amp fault, etc.)
- 12 uncommitted high-current open-collector outputs (sinking up to 100 mA): 5 to 24 Volts. (For functions such as drive enable/disable, full/half current, step/microstep, etc.)
- 32 uncommitted digital TTL I/O channels, 16 in and 16 out
- TTL outputs can sink 24 mA and source 15 mA
- All uncommitted I/O signals have default functional assignments which can be re-assigned by user as needed
- 8 channels of 14-bit analog inputs (optional) for analog joystick or other general purpose inputs
- 4 high-speed position capture (latch) inputs and 2 high-speed encoder compare (breakpoint) outputs (less than 1 uSec latency)
- E-Stop configurable to any digital input

Other Features
- Consistent, predictable execution rates: Peak performance is maintained no matter which features are enabled
- All features are software-configurable: no jumpers required
- Windows Flash Wizard for quick, power-on firmware updates
- On-board watchdog timer for failsafe operation
- All software is supplied at no extra charge
- Custom features and performance enhancements available upon request - source code is available to qualified OEM’s

Connections
- Standard or custom I/O interconnection boards can be mated directly onto the MultiFlex control card to reduce wiring
- Low cost I/O interconnection boards available with D-sub connectors or high-density SCSI connectors which are pin-compatible with PMC’s MultiFlex PCI card family
- Low cost cables available from PMC or 3rd party cable suppliers

Environmental & Mechanical
- Operating temperature: 0-55 °C (32-131 °F) R.H. non-condensing
- Size: 203 mm x 108 mm (8” x 4.25”)
